

The Local Crafts: System Administrator Manual

Welcome to the **System Administrator Manual**. This guide covers everything you need to know to manage The Local Crafts platform via the Central Command Dashboard.

As a Super Admin, your account has global read/write access to all platform data securely enforced by Firebase Security Rules.

1. Accessing the Portal

To access the Admin Dashboard:

1. Navigate to the /login page on the platform.
2. Select the **Administrator** tab.
3. Enter your admin email (muhammadnumanlatif@gmail.com) and your password.
4. Click **Enter Portal**.

[!NOTE]

The system strictly verifies your role via the profiles database collection. If an unauthorized user attempts to login as an Admin, they will be securely blocked.

2. System Core (Main Dashboard)

The **System Core** is your primary live operations center. It provides a real-time overview of the platform's health and transaction volume.

Key Metrics

- **Network Artisans:** Total number of registered artisans globally.
- **Transaction Node (Orders):** Total count of orders placed on the platform.
- **Global Pipeline (Revenue):** Total revenue captured across all orders.

Live Network Stream (Order Management)

This section displays a live feed of all recent transactions. You can manage the fulfillment lifecycle directly from this table.

To update an order's status:

1. Locate the order in the stream.
2. Click the dropdown menu in the **Status** column.
3. Change the status to reflect the order's real-world progress:
 - Pending: Payment/Order received, awaiting action.
 - Processing: Order is being prepared by the artisan.
 - Shipped: Handed over to logistics/courier.
 - Delivered: Successfully reached the customer.
 - Cancelled: Order was voided or refunded.

3. Heritage Categories

The **Heritage Categories** tab allows you to manage the global "Registry" of craft types (e.g., Copperware, Blue Pottery, Textiles). These categories dictate how products are classified and discovered by customers.

Appending a New Category

1. Click the **Append Category** button.
2. **Registry Key / Name:** The display name of the craft (e.g., "Multan Blue Pottery").
3. **Heritage Mapping Site:** The geographical origin of the craft (e.g., "Multan, Punjab").
4. **Thumbnail Stream Addr:** A URL linking to an image representing this category.
5. **Core Description:** A brief historical or technical description of the craft.
6. Click **Execute Transaction**.

Modifying or Purging

- **Update:** Click the Update button next to an existing category to modify its details.
- **Purge Node (Delete):** Click the Trash icon to permanently delete a category.

[!WARNING]

Deleting a master category will leave any associated products "orphaned" (without a category). Use this action with caution.

4. Identity Access (User Approvals)

The platform employs a strict onboarding workflow. When new Artisans sign up on the platform, their accounts are initially marked as pending. They cannot access the Artisan Dashboard or list products until you approve them.

Approving/Rejecting Artisans

1. Navigate to the **Identity Access** tab.
2. You will see a list of users requesting access. The badge will indicate the Role Attempt (e.g., Artisan).
3. **Approve:** Click the green Approve button. Their status will change to active/approved, granting them immediate access to their Artisan Dashboard.
4. **Reject:** Click the red Reject button if the user fails the heritage verification process. They will see an "Application Unsuccessful" screen when they try to log in.

5. Wholesale Management

The **Wholesale Command** section allows you to manage B2B (Business-to-Business) partnerships and affiliate commissions.

Pending Applications

When businesses apply for wholesale or partner access, they appear here.

- Review the business name, contact info, and business type.
- Click **Approve** or **Reject**. Approving a partner automatically updates their system role to wholesale, granting them access to bulk pricing and the B2B dashboard.

Commission Register

If a customer makes a purchase using a partner's referral link, the system automatically generates a 10% commission record.

- This table tracks all payouts owed to partners.
 - It displays the Partner name, the Earnings amount, the associated Order Reference, and the Payout Status (pending vs paid).
-

6. Security and Database Architecture

Your admin operations securely communicate directly with Firebase.

- **Data Integrity:** All changes made in the dashboard (Order Status, Category Updates, User Approvals) are written in real-time to the Firestore Database.
- **Security Rules:** The system relies on firestore.rules. Ensure you never manually alter the rules in the Firebase Console without verifying that the isAdmin() and isArtisan() checks remain intact.

[!TIP]

If you ever need to grant another user Admin privileges, you cannot do it from this dashboard (to prevent accidental escalation). You must go directly into the Firebase Console -> Firestore -> profiles collection, and manually change their role field to admin.
